TS32 FL SMV13 Powered by Vidaa is the TV that combines the SMART universe with terrestrial and satellite television content in DVB-T2/S2 HEVC digital technology with unprecedented video quality thanks to the new FULL HD LED displays.

The TV integrates perfectly with any style and setting thanks to its frameless frame of just 2 mm which leaves room only and exclusively for very high quality images.

Perfect for digital terrestrial signal reception, but also for free satellite TV: thanks to the HD tivùsat certification and its compatibility with the **tivùsat** CAMs distributed by TELE System, you will have hundreds of HD quality television channels available, always up to date.

The TV becomes the center of home entertainment with hundreds of programs always available thanks also to the functions offered by the HbbTV protocol which allows you to review content that has already been broadcast or, thanks to the "restart" function, to play from the beginning the TV program you are watching.

By connecting a hard disk to the USB2.0 port, the TV transforms into a media player while the "TV PAUSE" function allows you to pause the live broadcast of the TV program you are watching to resume viewing at a later time: this will be enough press the "TV PAUSE" button on the remote control to activate it.

Among the features we find two remote controls, a standard one and a second "EASY" remote control, with large buttons for essential functions, designed specifically for elderly people.

TS32FL SMV13

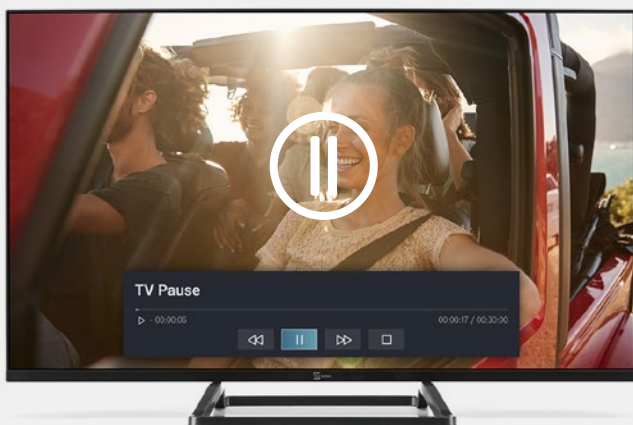

Enter the smart Vidaa world

All the APPs of the moment always updated!
TELE System TVs with Powered by Vidaa operating system guarantee simple and intuitive navigation among your smart contents.

You can also easily manage your favorite apps directly from your smartphone, thanks to the free Vidaa application

With the free Vidaa app you turn your smartphone into the remote control for your TV. The app includes all the traditional remote control functions and much more

TV PAUSE...and resume watching whenever you want

The "TV PAUSE" function, now even easier to use on TELE System TVs, allows you to pause the live broadcast of the TV program you are watching to resume watching it at a later time. After connecting an external USB memory, simply press the "TV PAUSE" button on the remote control to activate it; simpler than that!

Discover true ULTRA HD with tivùsat

The **tivùsat** HD certification offers maximum compatibility with the **tivùsat** CAM distributed by TELE System, to broaden the viewing experience and quality. Over 140 Italian and foreign television channels, of which 70 are already in HD, always updated! TS32 supports the HbbTV Ver. 2.0.2 protocol which allows access to interactive applications and free content while watching a normal television channel. For example, you can: play programs that have already been broadcast or, thanks to the "restart" function, play the program you are watching from the beginning.

Standard & easy remote control

Included in the package you will find, in addition to the standard remote control, also a convenient remote control for essential functions with larger buttons, designed specifically for elderly people.

insert a welcome message (jpg, animated gif, URL of the site's home page), predefine the menu language, define the maximum/minimum volume values, set the source signal and the television channel in advance at the time of power on.

With HOTEL MODE active*, the WEB PRIVACY function deletes the web history and entered APP accounts every time the TV is turned off

Hotel Mode function with "WEB PRIVACY"

The completely updated HOTEL MODE function is particularly suitable for hotel facilities because it prevents users from accessing more advanced functions such as menus and submenus for TV settings. If the function is activated, it will allow you to customize various parameters based on the needs of the accommodation facility. It will be possible to

**With HOTEL MODE active, the Netflix application is not available.*
