Hornet Ultra Controller Upgrade Method

1. Run the upgrade package on the PC.

2. Press and hold the [] action button on the controller, and connect the controller to the USB port on the PC using the data cable included in the package.

3. After the controller is successfully connected to the computer, the [Update] button in the upgrade tool will be highlighted.

4. Click the [Update] button, and the upgrade tool will upgrade the controller. Once the upgrade is complete, [PASS] will be displayed.

After the above upgrade, the controller indicator light will flash, indicating that calibration is required. Please continue with the following calibration steps.

1.To calibrate the controller, unplug the data cable, press and hold the [Create] and [Option] buttons on the controller, and reconnect the controller to the PC.

2.Press the L2 and R2 triggers 3 times simultaneously.

3.Rotate the left joystick and right joystick 3 full circles each.

4.Press and hold the  button for 1 second to confirm (indicator will staylit when successful).
