

Quick Installation Guide

HD Wireless PTZ Dome IP Camera with P2P

Model: SABIP1400

V1.0

Package Contents

1 Hardware Introduction

● Physical Description

● Hardware Connection

1. Mount the antenna and make it stand vertically.
2. Connect the camera to the LAN network (Router or Switch) via ethernet cable.
3. Connect the power adapter to the camera.

2 Software Installation

1. Insert the CD into the CD drive of your computer.
2. Find the folder "Equipment Search Tool", then go to the folder "For Windows OS" or "For Mac OS". Copy and paste the Equipment Search Tool file to your computer, or drag it onto your desktop.

Note:

If your computer doesn't have CD drive, you can download the IP camera tool from our website for free.

3 Access the Camera

1. Enable the DHCP feature of your router (Enabled by default normally), then open the IP Camera Tool program. It should display the camera's IP address in your LAN (Local Area Network).

2. Double click the camera listed here, and your default browser will open up to the camera's login page. When logging in for the first time, you will need to download and install the IPCWebComponents. We will use Internet Explorer as an example. For Google Chrome, MAC OS Safari, or Mozilla Firefox, please refer to the User Manual.

Note:

It does not support 64-bit browser.

3. After installing the IPCWebComponents, refresh the browser and click **Login**.

4. When setting up your camera for the first time, it will request that you modify the default username and/or password if both are still set to default. Input the **New username**, **New password** and **Confirm the password**, click **Modify** to complete the modification. You will now use the new username and password to log in to the camera in the future.

5. After logging in, you should see live video on the web interface.

Notes:

- After log in for the first time, it will go to "Setup Wizard" automatically. Please set the basic parameters, such as the camera name, camera time, wireless settings and more.
- If you forget your username or password, you can press and hold the reset button on the cable of the camera using a pin for 5 seconds. This resets the camera to factory defaults.
- If the IPC automatic focusing failed(image blur), you need to click the Focus to manually adjusting focus.

3. You can check the port of your camera here. If you want to set Remote Access for several cameras on the same network, you will need to change the HTTPS port for each camera.

4. If UPnP has been enabled in the router, you do not need to perform the following steps. If UPnP is disabled, you need to select one of the following methods to configure port forwarding on your router. For these steps, we will be using the TP-LINK brand wireless router as an example.

4 Wireless Connection

1. Choose “**Settings**” on the top of the camera web page, then go to the “**Network - Wireless Settings**” section on the left side of the screen, then click **Scan**.

2. Click the SSID (name of your router) in the list, and the corresponding SSID and encryption will be filled automatically on the right side of the page. All you need to do is input the password for your wireless network.

3. Click the **Save** button and disconnect the network cable. Keep the camera powered on until it shows up in the IP Camera Tool. If the camera does not show up, try unplugging the power cable from the camera and plugging it back in. It should connect to the wireless network automatically.

5 Remote Access

If you want to access your camera via web browser or app outside of your network, you need to configure some settings.

1. Choose “**Settings**” on the top of the camera web page, then go to the “**Network > IP Configuration**” section on the left side of the screen. From here, uncheck **Obtain IP DHCP**.

2. Enable UPnP and DDNS in the camera’s settings page. We recommend you to use the DDNS by factory default.

6 Access the IP Camera by Smart Phone

You can add the Foscam IP Camera using a Smartphone like an iPhone or Android device. Ensure your smartphone is connected to the internet.

1. Download the App

You can go to the App Store or Google Play store and search for the term “**SAB IPC Viewer**”, then install it.

The App icon will be displayed after successful installation:

SAB IPC Viewer

2. Add the IP Camera

Run the APP, then you can tap the "+" button on the App and follow the wizard to add your camera.

5. Now you can access your IP camera by https://domain name : HTTPS port via the Internet. For example, you can type the following in a web browser: https://ba6763.myipcamera.org:443
